The Nature Of Sound Waves

Sound is a longitudinal, mechanical wave. Sound can travel through any medium, but it cannot travel through a vacuum. There is no sound in outer space. Sound is a variation in pressure.

A region of increased pressure on a sound wave is called a compression (or condensation). A region of decreased pressure on a sound wave is called a rarefaction (or dilation).

Sound wave propagation means the traveling of sound from one place to another. As you know a medium is required for all the mechanical waves, so sound waves too. Vacuum is not a place where sound can propagate.

A sound wave is the pattern of disturbance caused by the energy traveling away from the source of the sound. Sound waves are longitudinal waves. This means that the propagation of vibration of particles is parallel to the direction of the energy wave propagation. When the atoms are set in
